

1 Introduction

OB90A32M3U32VP

The OB90A32M3 is ARM Cortex-M0 based microcontrollers for embedded applications featuring a high level of integration and low power consumption. The ARM Cortex-M0 is a next generation core that offers a simplified instruction set with deterministic behavior.

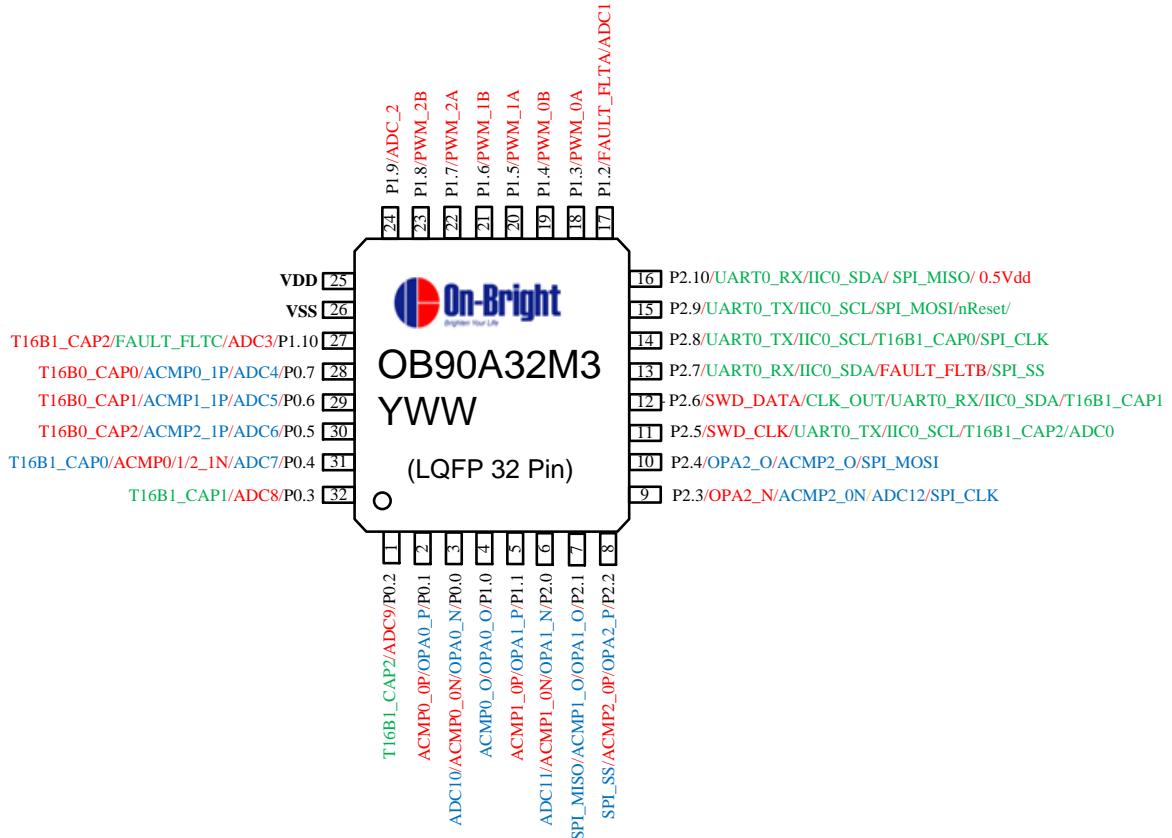

The OB90A32M3 can run up to 72 MHz, and operate at a wide voltage range of 1.8V ~ 5.5V. Up to 32K bytes flash, 4K bytes ram, three general purpose timers, one UARTs interfaces, one SPI interface, an 13-channel 12-bit ADC, Watchdog Timer , PWM generators providing six channels, three Analog Comparators, three operational amplifier and one I2C Interface.
